Omni has established a solid reputation as a trustworthy manufacturer and supplier of office furniture since 2004. Specializing in high-quality customizable furniture solutions, our extensive product range includes chairs, desks, workstations, space division, storage, and accessories such as monitor arms and power solutions.

Production Bases and Distribution Network

Omni has developed a deep understanding of premium office furniture through two decades of focused exploration, design, and manufacturing. As one of the few companies that skillfully combine a variety of traditional techniques such as plastic, metal, wood, surface finishing, rapid prototyping, and machining, We have firmly established ourselves in the industry. Our clients trust us for our rigorous quality control measures, reliable supply chain, meticulous focus on details, and efficient delivery times.

Our Story

2003

During his visit to the United States, Henry Zhang, the owner of Omni, met Mr. Glenn Steil, an experienced professional in the office furniture industry. Their discussion led to a collaboration project to develop American-style office furniture in China. This unexpected opportunity not only sparked Henry's aspirations but also paved the way for his future ventures in the office furniture sector.

2004

Jiangsu Omni Industrial Co., Ltd. (Omni) has been established in Yangzhou, China. We specialize in manufacturing system-based office furniture that integrates elements of American and European styles.

2005

We designed and developed our first-generation product, the Steel-Wood Panel System. This innovative product quickly gained popularity in the US market. Our strategic partnerships with US office furniture distributors further strengthened our presence and broadened our reach in this competitive industry.

2008

We introduced our second-generation product, the Tile Panel System, featuring a collection of stacked steel panels. This system continues to be popular in both the European and US markets.

2009

We acquired over 200 acres of land in Texas, US. At the same year, we established the North America Product Research and Development Center and Customer Service Center known as OMNIMAX USA.

2011

Our research and development team once again pushed boundaries with the creation of the sleek Panel Desking Plus series. This collection was specifically designed to meet the evolving needs of contemporary office spaces where efficiency and flexibility are crucial.

2014

We have made a significant impact with the launch of the innovative Magick Bench collection, which showcases stylish aesthetics, original design, and cutting-edge craftsmanship.

2015

Understanding the importance of power and connectivity in today's digital age, we started providing integrated power solutions for modern work environments, ensuring people do their best work in the places where work happens. This dedication has led to the establishment of Omni Electrical, committed to delivering professional office power access products.

2016

Recognizing the worldwide need for enhanced health and safety standards in techbased office furniture, we took a courageous move by establishing Omni Technology focused on creating power management systems for such furniture. This move ensures that Omni continues to lead in providing secure and efficient solutions to our clients.

2019

We expanded our development by introducing the Kupp series of seating products, specifically designed to meet the growing market demand for shared offices. This addition enhances Omni's comprehensive solutions for system office furniture, leveraging unique plywood technology.

2020

We have established the Intelligent Manufacturing Center in Rugao, Nantong, with the goal of focusing on technological progress and enhancing production and manufacturing capabilities.

2023

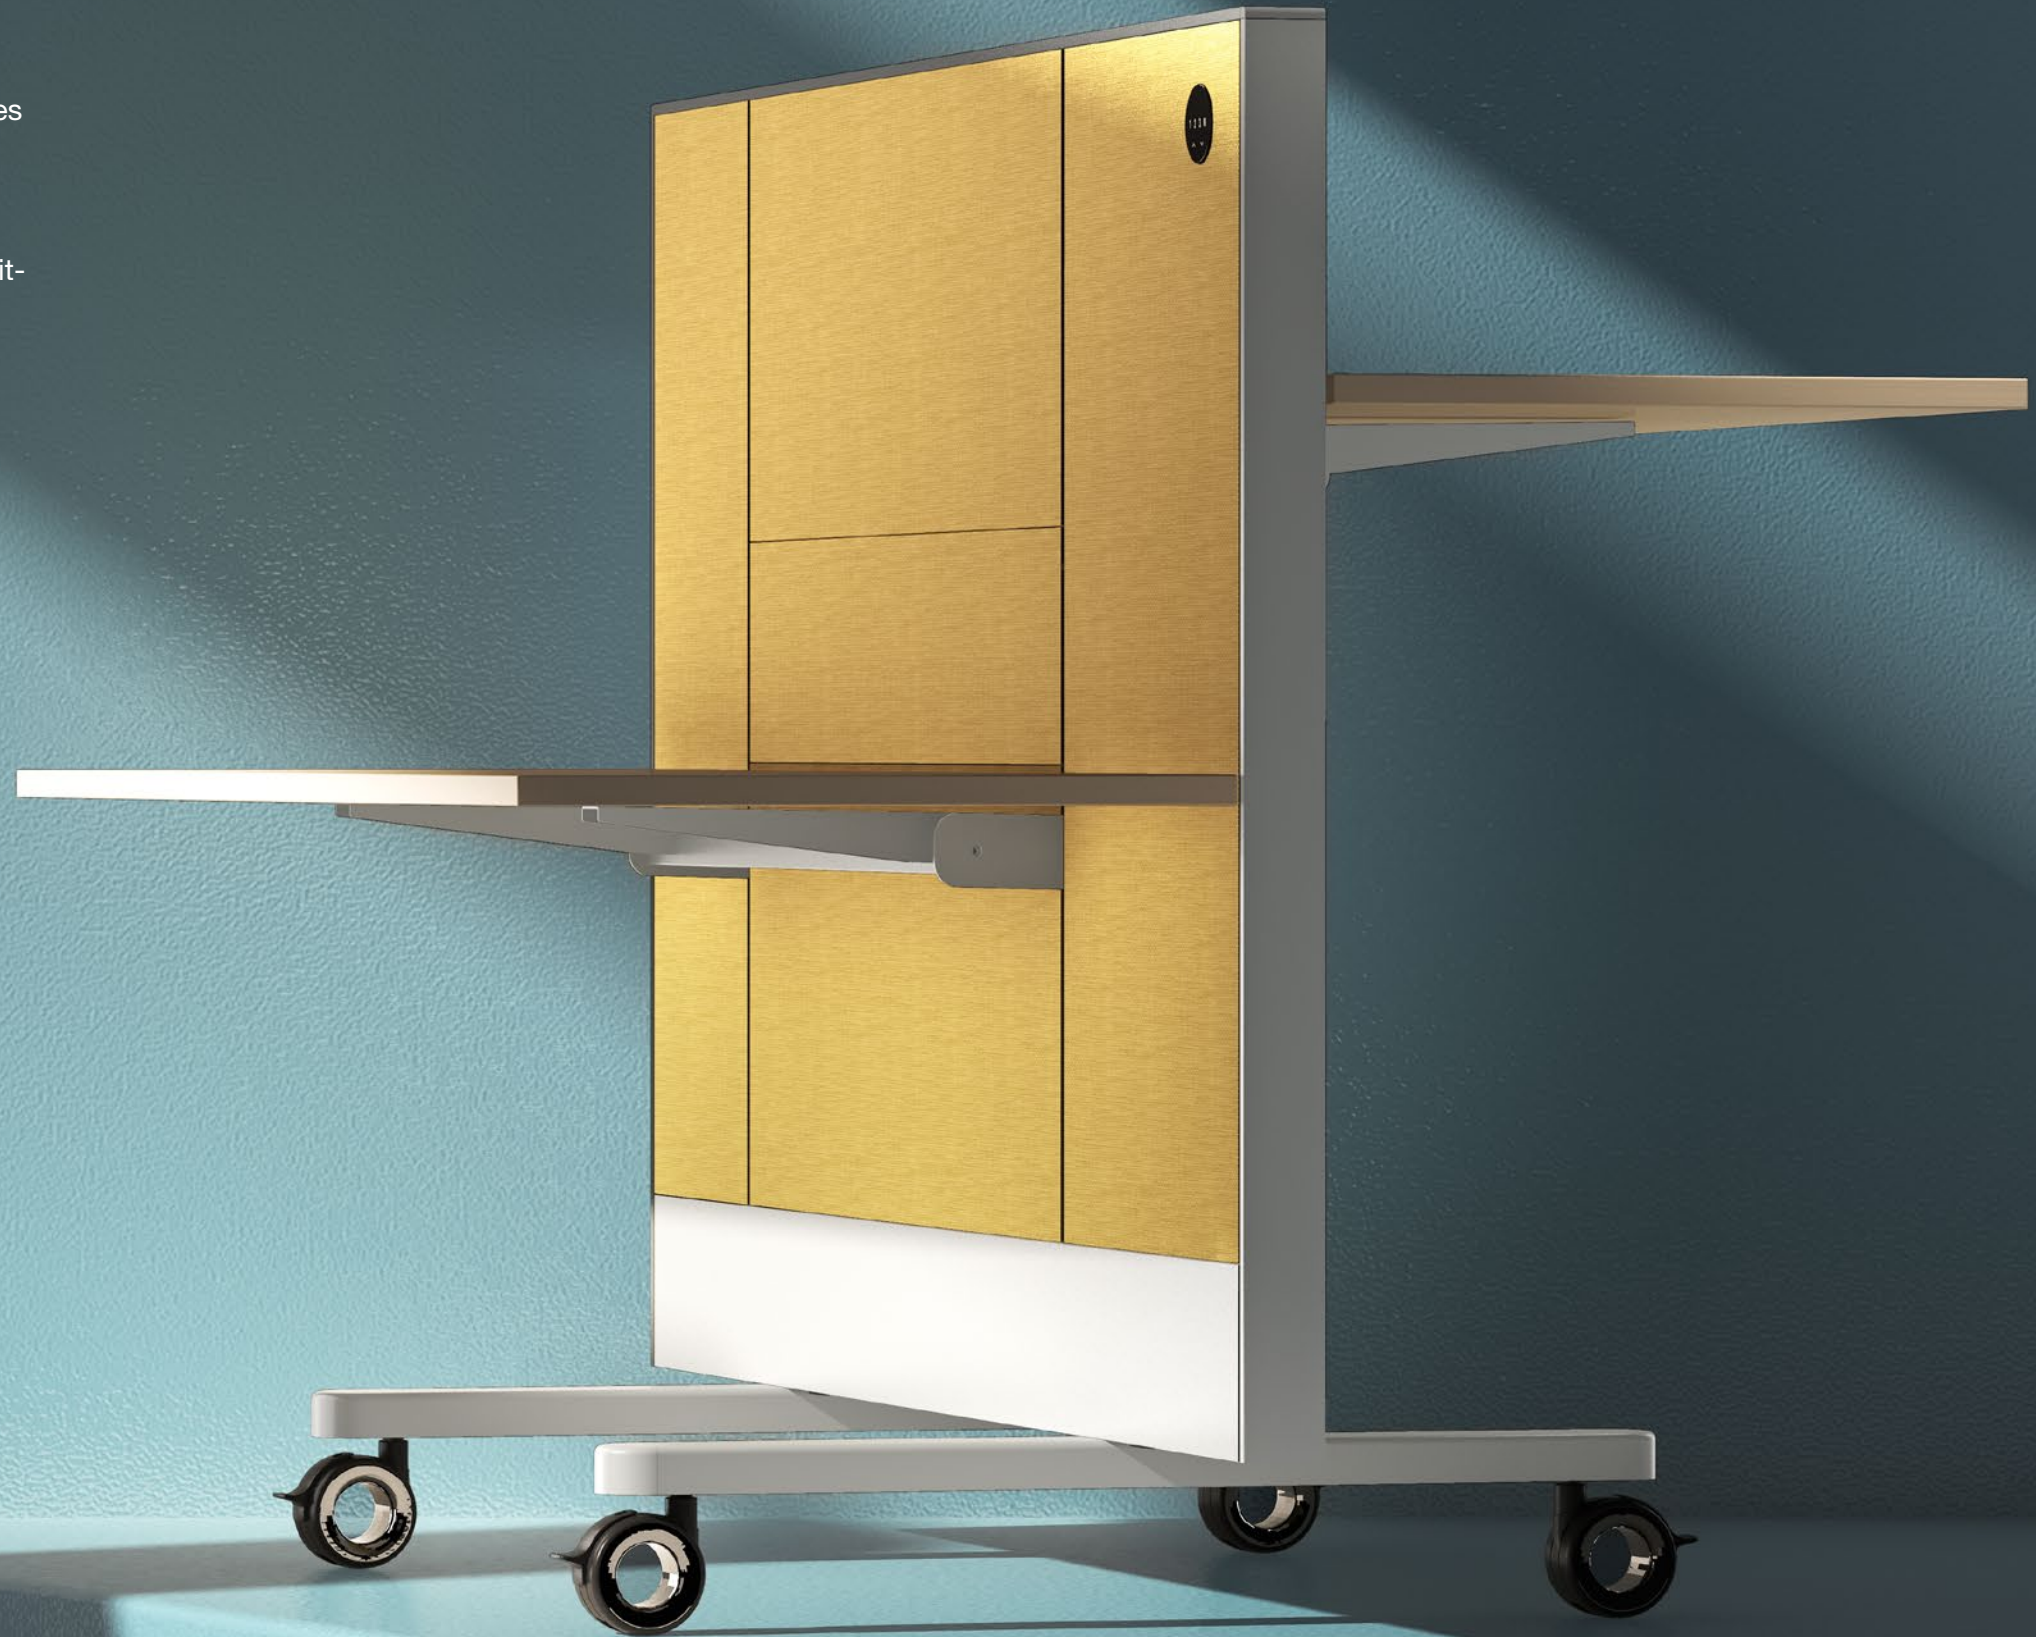

We have successfully expanded our operations in Shenzhen by establishing Omni Technology (Shenzhen) Co., Ltd. This strategic move will significantly enhance our production and research capabilities. Moreover, we are actively exploring new markets to improve accessibility and services for a wider customer base.

Panel Systems

The process of creation is often a collaborative effort, but there are times when we desire some separation.

Today's panel-based workstations offer users a variety of options for posture and privacy, with easy access to power and data as needed. Sit-stand options help establish boundaries while maintaining connectivity, while X-RAIL and AO2 panels create shielded areas and semi-enclosed spaces for more focused work or for added privacy.

Desks and Workstations

Panel Systems · HA

HA panel system is a groundbreaking solution designed to enhance productivity and well-being in fast-paced, collaborative work environments. Its innovative design allows for easy movement and adjustment of work surfaces to accommodate various postures.

By incorporating the lifting columns within the panel frame, HA panel system maximizes workspace usage, ultimately promoting employee well-being.

HA panel's intuitive touch controllers allow users to effortlessly adjust the work surface to their preferred height, accommodating a variety of postures.

Comes equipped with casters that allow for easy movement.
HA moves with you and your work. It's mobile, yet stable.

Compatible with the majority of panel systems available in the market, allows for flexible creation of various styles and configurations, making it distinctly yours.

Our work environment has evolved significantly in the past decade, and this trend is set to continue. The modern workplace requires a diverse range of applications to cater to different types of workers and tasks. Whether it's individual work or collaborative projects, X-RAIL provides a variety of tools to address these challenges today and adapt to future needs.

X-RAIL was designed to seamlessly integrate and complement a variety of other Omni products. Its simple design allows you to design a variety of spaces that blend together, both aesthetically and functionally.

Power supply can be flexibly installed, and it is UL safety certified.

Provides independent and adaptable workstation combinations, while maintaining connectivity.

Customizable workstation styles, metal frame paired with a variety of panels like soundproofing material, veneer, etc., to meet diverse needs.

Modular components allow for the extension of 120-degree irregular workstations to accommodate employee work areas, meeting rooms, and other small partition requirements.

AO2 panels have been designed to create spaces within an open floor plan, enabling organizations to strike a balance between privacy and collaboration.

They cater to a wide range of applications and material options. Additionally, these panels offer strong technology support and long-term flexibility to adapt to changing needs.

Metal frame paired with wooden panels and external fabric for color variety; moisture-resistant and heat-resistant.

Standalone private workstations that offer privacy in close proximity.

Various planning and material options provide the opportunity to customize the look of any space. Glass screens can be stacked to allow access to natural light.

UL LISTED overall safety certification, compliant with Class A fire resistance rating.

AO2 panels make it easy to create private spaces that can support impromptu discussions and private meetings.

Experience a casual workspace with a lounge sofa and small table, featuring built-in power sockets for uninterrupted communication and collaboration, ensuring a clutter-free environment.

Storage

Lack of organization leads to time wasted in cluttered spaces as workers search for necessary items. By providing easy access to tools and personal storage, employees can optimize their workspace and productivity. Omni storage solutions offer various sizes and designs to cater to the diverse needs of workers, accommodating items like bags, mobile devices, and documents effectively.

Accessories

Built with a sturdy load-bearing frame for outstanding durability, ARCH is equipped with a press-to-release rebound rail system for easy drawer access with a gentle push.
