SELLA.

Reimagine the Sitting and Working Experience with Sella, a Masterpiece from the Leading Designer.

The number of people coming into the office each day has decreased. When they do come in, they often move around for meetings, collaboration, and individual work. Since individuals typically don't spend the entire day in one chair, they are less likely to make adjustments to their seating.

To address this, the Sella chair back has been designed with adaptability in mind, reducing the need for frequent adjustment. It offers a truly adjustable and comfortable sitting experience, allowing you the freedom to easily find your perfect posture and move effortlessly.

Design Story

The Sella chair was designed by Omni's specially appointed and esteemed designer, who has made a significant impact on the office furniture industry. The inspiration behind Sella's design came from the designer's observation that, in his own words:

"Increasingly, task chairs have looked like machines rather than pieces of furniture. The soft, organic forms of the chair back and arms are an antidote to this. The shape and flow of the form are intended to make the chair feel like one piece, not a collection of mechanical parts. This, and the simple overall form, is intended to give a more human feel to the task chair."

Not only provides optimal ergonomic back support but also maintains clean lines for an aesthetically appealing look.

Redefining Comfort

Lumbar Support

Designed with a contour backrest in a natural S shape, the chair automatically accommodates, reducing the need for frequent adjustments and providing exceptional support for your lumbar and spine.

Recline Adjustment

With four recline positions, find the right level of resistance against your back for work, relaxation, or productivity. The 3:1 back-to-seat tilt ratio allows users to lean back while maintaining proper alignment between the spine and hips.

Adjustable Seat Depth

The seat cushion can be adjusted forward or backward, ensuring full support for your back while keeping a comfortable distance between your knees and the chair's edge.

Height adjustment & Tension Control

Allows for a customized fit suitable for individuals of any stature, giving users total control.

Flexible Arms

Choose from fixed arms for simplicity, stability, and recent design trends, or opt for 2D/3D/4D adjustable arms. They let your arms and shoulders fall naturally as you work with various devices and interfaces.

Swivel and Mobility

Enjoy a smooth 360-degree swivel and caster wheels for easy movement and accessibility around the workplace.

Redefining Style

Crafted with premium components, including a base component sourced from the renowned brand DUNATI®.

The back is seamlessly molded, exhibiting a flawless finish without any visible traces of tooling marks. Constructed with 3D knitted mesh fabric, it ensures both durability and breathability.

Effortless assembly with only 3 screws.

The Sella chair offers a diverse range of color combinations to satisfy personalized workspace aesthetics. With 12 options for the 3D knitted mesh fabric on the backrest and 13 choices for the seat fabric, you have the freedom to create a style that perfectly suits your taste.

Redefining Durability

The Sella Chair has passed the **BIFMA** test for durability and safety.

We guarantee that all the plastics used are brand new.

We conducted additional testing to ensure the strength and durability of the backrest. It can withstand **>120,000** recline cycles, making it twice as strong as the BIFMA requirement of 300 pounds.
